The **PAL-14 is an automated electric paper separator.** It optimizes the amount of paper being fed into your paper punch. No more paper jams from too much paper or inefficient punches from too little paper.

Just adjust the dial on the front of the PAL-14, press the button, and the PAL-14 automatically moves to the level of the paper pile and lifts the corner of the paper pile with just the right amount of paper for easy insertion and punching. When the paper pile is gone, the PAL-14 automatically resets to the top and is ready for more paper.

The PAL-14 can be used in a stand-alone configuration or as a module mounted to any Rhin-O-Tuff vertical OD or HD punch. It can also be mounted on top of the APES system for even greater efficiency. It is flexible enough to handle index tabs, clear covers, and oversized covers in addition to the normal paper range.

Features

- Uses paper sizes from 8 1/2" x 5 1/2" (140mm x 140mm) up to 8.5" x 14" (356mm x 356mm) legal size including tabs and up to 3 reams at a time
- Able to combine with existing APES-14 attachments
- Fits on any vertical OD or HD series machine
- Provides average paper count accuracy of + or -1 sheet for each lift
- Variable Paper Lift thickness
