The Advantec75 is breakthrough in currency counters. Built to standards usually reserved for aircraft components, it combines speed, precision, and versatility into one heavy-duty machine. Packed with cutting-edge features and tested in ultra-demanding counting environments, the Advantec 75 is ready for any mission.

In an industry first, the Advantec75 displays both the cause and the *remedy* for counting errors in easy-to-understand language on its large liquid crystal display. Of course, it also keeps the user informed of key count information and operating mode status.

The Advantec75 offers adding, counting, batching, and adding + batching modes, making it the perfect choice when all-around performance is a requirement. Infrared (Basic and U models) and ultraviolet (U model) sensors are able to spot a wide range of bill discrepancies, including half, double, and chain notes, note-width differences, and sophisticated counterfeits.

An intuitive keypad coupled with an easy-to-read display that provides comprehensive information makes operating the Advantec75 easy. User preferences such as screen brightness and keypad sounds can be quickly customized. The Advantec75 CAD also sleeps with one eye open, instantly switching from energy-saving sleep mode to counting when bills are loaded in the hopper.

The Advantec75 counts up to 1,500 bills per minute without sacrificing accuracy, reliability, or crucial detection capabilities. Counting speeds of 800, 1000, and 1200 are also available to ensure smooth counting of both worn and new bills.

### Features

- Four counting speeds accommodate both worn and new bills
- Operating modes: Count, add, and batch modes; add + batch mode

- Large, top-loading hopper holds 425 bills (new)
- Rugged, heavy-duty construction
